DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/19/07 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-7 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-3 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by De Filippis (5,825,108).

Regarding claim 1, De Filippis shows a container (16 and 17, Figure 2) for mounting a motor controller (MOSs 23) for a heat-dissipating device (intended used – patentable weight not given) having a chassis (34, 37, Figure 14), said container (16,

17) comprising a main body (18) directly mounting on the chassis of the heat-dissipating device and having a slot (17) to receive and directly position the motor controller (23).

Regarding claims 2, 3, and 5-7, De Filippis also shows the container (16, 17) being substantially square, the slot (17) being shaped according to the profile of the motor controller and formed in the central portion of the container, the container being formed by a plurality of positioning pillars (cooling fins16), the positioning pillars have U-shaped cross sections respectively and are separated according to the profile of the motor controller, and the container being mounted on, adhered to, or integrally formed on the chassis (Figure 14).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Application/Control Number: 10/772,322 Page 4

Art Unit: 2834

7. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over De Filippis in view of Hoover et al. (4,910,420).

Regarding claim 4, De Filippis shows all of the limitations of the claimed invention except for the container having at least one hook to secure the container on the chassis of the heat-dissipating device.

Hoover et al. shows the container (72, Figure 2) having at least one hook (150, Figure 7) to secure the container on the chassis of the heat-dissipating device for the purpose of increasing the mounting strength.

Since De Filippis and Hoover et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to include at least one hook to secure the container on the chassis of the heat-dissipating device as taught by Hoover et al. for the purpose discussed above.

Allowable Subject Matter

8. Claims 8-23 are allowed.

9. The following is a statement of reasons for the indication of allowable subject matter: see applicant's response dated 1/19/07.

Information on How to Contact USPTO

Application/Control Number: 10/772,322 Page 5

Art Unit: 2834

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dang D. Le whose telephone number is (571) 272-2027. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on (571) 272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
